1 Preface

I'd like to thank you personally for your interest in sponsoring Newport Rocketry Club. All donations will go towards launching Newport Rocketry to new heights as we educate and provide valuable experience to the next generation of engineers.

Sincerely

Kavel Rao, President

2 The Team

Newport Rocketry is a team of highly dedicated students at Newport High School in Bellevue, Washington. We design, build, experiment, and fly our own rockets and compete in national competitions.

3 TARC

Since its conception, Newport Rocketry has participated heavily in the Team America Rocketry Challenge (TARC). Over the years we have accumulated a plethora of accomplishments in the competition.

Because of the club's focus on the competition, it is the main use of our budget, as we need to support and foster multiple teams. **

4 Outreach

Newport Rocketry hosts and participates in numerous outreach events in the community to encourage children to engage in STEM activities. In the 2017-2018 school year, club members reached over 200 children through events in cooperation local schools and KCLS.

Kids show off their rockets at a library workshop.

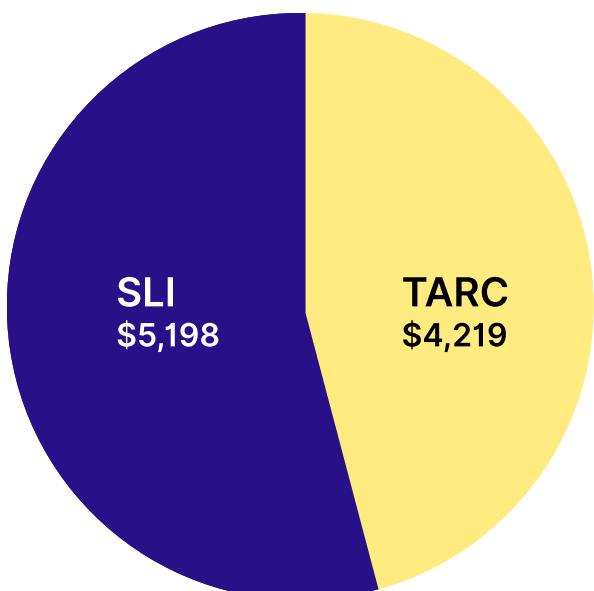

5 Past Budgets

Last year, our total spending was \$9,417. This includes materials for NASA Student Launch Initiative and the Team America Rocketry Challenge. However, in 2015-2016, without SLI, the club was able to dedicate most of its resources towards its excellent result in TARC.

2017-2018

6 Projected Budget

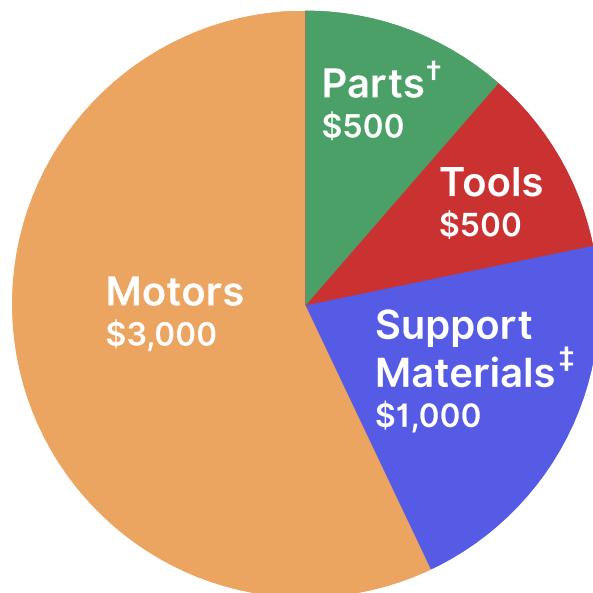

This year, Newport Rocketry aims to fundraise \$10,000. The club needs materials mainly for TARC, but also for non-competition purposes, such as the Fire In The Sky event, experimenting with novel designs, and for members to acquire Junior Level 1 High Power Rocketry certifications.

Transportation funds are required to travel to TARC finals in Washington D.C.

General Breakdown

TARC Breakdown

* "Other" items include projects like experimental fin designs and events like Fire in the Sky (FITS).

† "Parts" includes, but is not limited to airframes and couplers of various sizes, nosecones, 3D printing material and shockcord.

‡ "Support materials" includes, but is not limited to parachutes, launchpads, launch computers/controllers.
